INSTRUCTIONS FOR USE C3-OPTIMUM PRODUCTS

C3-OPTIMUM products can be used to clean indoor and outdoor objects. Depending on the degree of soiling, cleaning frequency, size of object and location of the object (indoors or outdoors), use the recommended C3-OPTIMUM product

Cleaning of large(r) objects / surfaces in the outdoor area

- Remove loose dirt with a soft brush
- Spray or moisten surface/object with the selected C3-OPTIMUM product, if necessary diluted with water in a ratio of 1:2 to 1:3. On average 2 to 3 sprays per m².
- Spread the applied liquid with a sponge, brush or moistened microfiber cloth over the surface (spreading the cleaner over the surface will also help to reduce consumption and thus save money).
- Allow C3-OPTIMUM cleaner to act for 10-20 seconds.
- Clean surface with soft brush, sponge or damp microfiber cloth, if necessary with clean water.
- If necessary, rinse with water and dry with a microfiber cloth (only to avoid "white spotting" due to dried-up lime from tap water).
- In case of heavy soiling, repeat the cleaning process if necessary.

Cleaning small objects / surfaces in indoor or outdoor areas

- Remove loose dirt with a dry microfiber cloth.
- Spray or moisten surface/object with selected C3-OPTIMUM product, if necessary diluted with water in a ratio of 1:2 to 1:3. On average 2 to 3 sprays per m².
- Allow C3-OPTIMUM cleaner to act for 10-20 seconds.
- Clean the sprayed wet surface with a moistened microfiber cloth and remove dirt.
- If necessary, dry the surface afterwards to avoid "white spotting" due to dried lime scale in the water.
- In case of heavy soiling, repeat the cleaning process if necessary.

NOTE C3-OPTIMUM Hardware cleaner:

We recommend applying C3-OPTIMUM hardware cleaner to the surface using a microfiber cloth.
